MERINO COMPUTER CONCEPTS

SERVICE BRIEF
Virtualization

Digitize the way your company does business with virtualization services.

Virtualized Computing Resources

We offer hosted computing solutions to help businesses cut costs and improve efficiency.

If you are still using a physical server to operate your business, you will find yourself limited by the restrictions this places on your network. By virtualizing your company's servers and desktops, you can provide your business with a whole host of benefits.

The virtualization of both hardware, such as your server, and your desktop applications, is the act of separating the physical component from the digital component. In essence, you are removing the physical aspect of your technology and placing it in a virtual setting where it can thrive.

Slash Operational Costs With a Virtualized Server

Affordable IT infrastructure options from Merino Computer Concepts.

By eliminating the need for physical servers, you open the door to all sorts of possibilities; all of which will save you time and money. By engaging fewer pieces of hardware, you'll spend less money on maintenance and energy costs. More often than not, your servers are being underutilized. A single server can be powerful enough for many of your company's needs if it's partitioned correctly. This strategy presents efficient use of your hardware, and goes a long way toward maximizing the value your company sees on it's IT.

Increase Uptime and Productivity

Experience seamless business computing with Merino Computer Concepts' hosted solutions.

Do not let physical servers slow down your company's production with required maintenance downtime. Virtual servers let your business continue to operate, even through maintenance.

Our virtual servers are equipped with migration capabilities, which make it easier than ever to move data back and forth between servers. This ensures the reliable uptime your organization is searching for in a hosted computing solution. In face, unplanned problem, such as power outages and low bandwidth speeds, aren't a problem for our virtual servers. Issues can be resolved quickly, without hindering your company's productivity.

In a world where technology is growing more and more prominent, your business cannot afford to fall behind. Look to virtualized computing to improve your company's efficiency.

FEATURES:

- Digitize all the information you used to host locally.
- Reliable computing infrastructures and environments in which to get work done.
- Fully utilize hardware to stop wasting resources.

BENEFITS:

- A reduction in productivity-crippling downtime.
- Substantial improvement of mobility.
- Dynamic value.
- A reduction of your organization's environmental impact.
- Customizable options that allow for all the software and storage your company needs.
